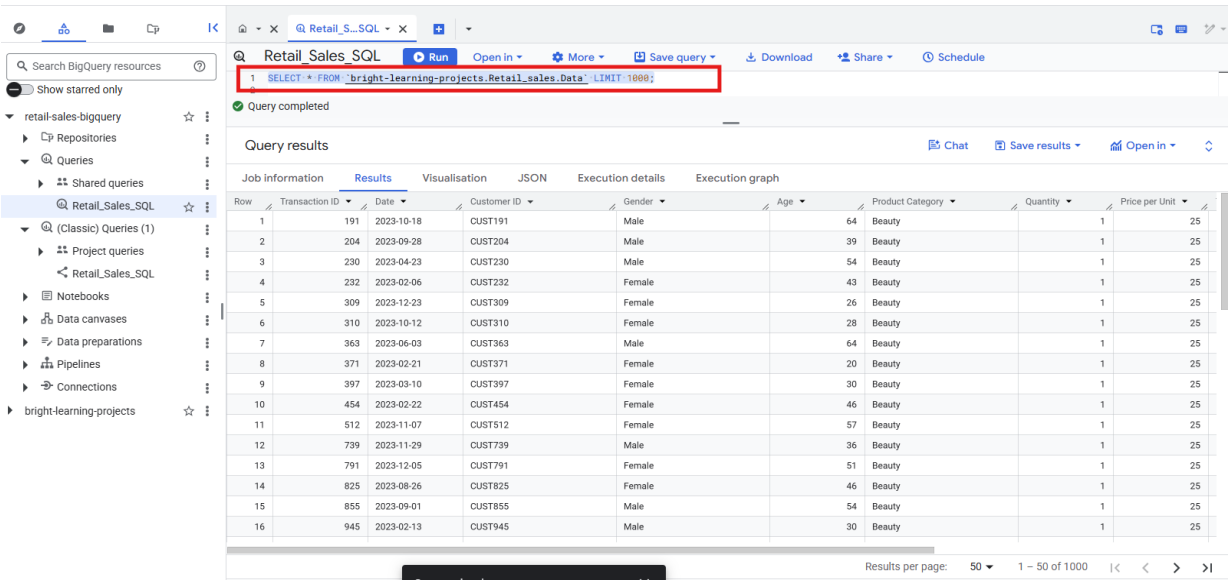
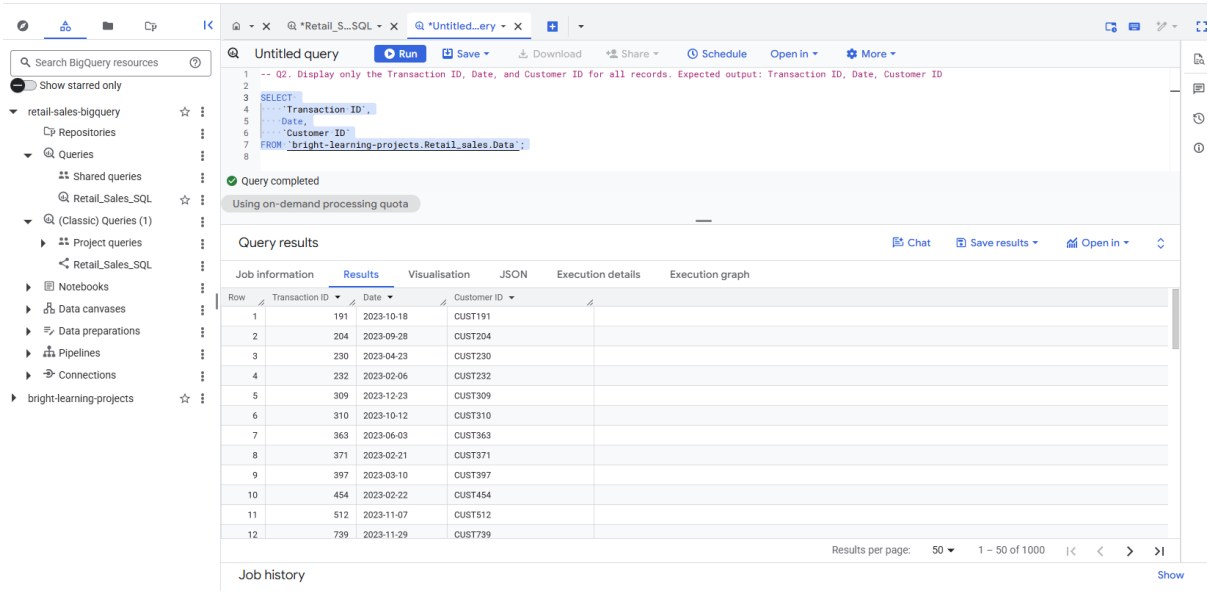
Retail Sale Dataset

1. Show All columns in `bright-learning-projects.Retail_sales.Data`



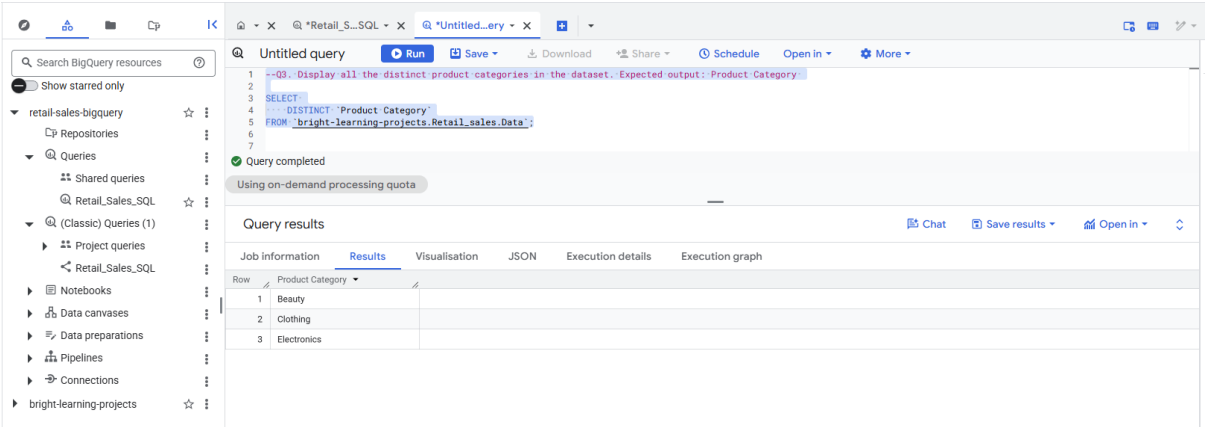
Row	Transaction ID	Date	Customer ID	Gender	Age	Product Category	Quantity	Price per Unit
1	191	2023-10-18	CUST191	Male	64	Beauty	1	25
2	204	2023-09-28	CUST204	Male	39	Beauty	1	25
3	230	2023-04-23	CUST230	Male	54	Beauty	1	25
4	232	2023-02-06	CUST232	Female	43	Beauty	1	25
5	309	2023-12-23	CUST309	Female	26	Beauty	1	25
6	310	2023-10-12	CUST310	Female	28	Beauty	1	25
7	363	2023-06-03	CUST363	Male	64	Beauty	1	25
8	371	2023-02-21	CUST371	Female	20	Beauty	1	25
9	397	2023-03-10	CUST397	Female	30	Beauty	1	25
10	454	2023-02-22	CUST454	Female	46	Beauty	1	25
11	512	2023-11-07	CUST512	Female	57	Beauty	1	25
12	739	2023-11-29	CUST739	Male	36	Beauty	1	25
13	791	2023-12-05	CUST791	Female	51	Beauty	1	25
14	825	2023-08-26	CUST825	Female	46	Beauty	1	25
15	855	2023-09-01	CUST855	Male	54	Beauty	1	25
16	945	2023-02-13	CUST945	Male	30	Beauty	1	25

2. Display only the Transaction ID, Date, and Customer ID for all records. Expected output: Transaction ID, Date, Customer ID

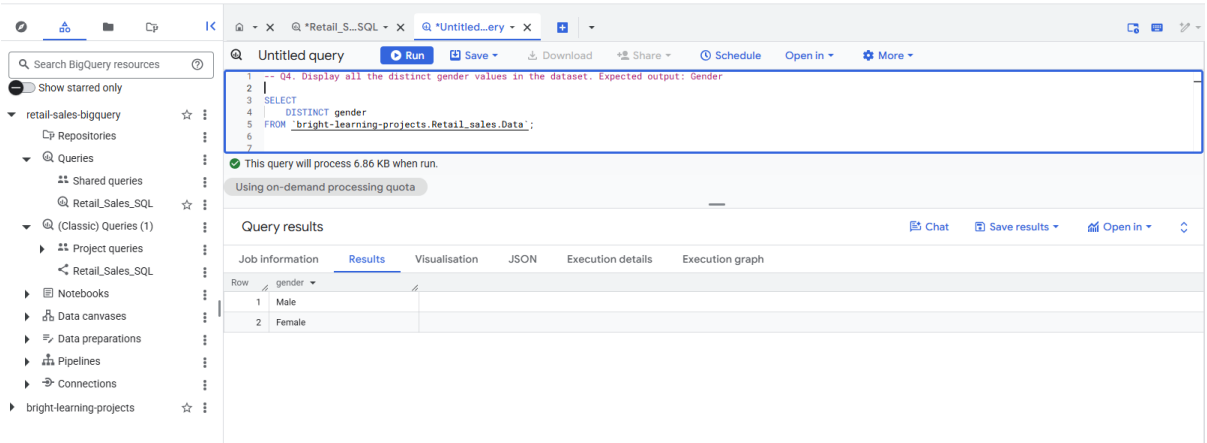


Row	Transaction ID	Date	Customer ID
1	191	2023-10-18	CUST191
2	204	2023-09-28	CUST204
3	230	2023-04-23	CUST230
4	232	2023-02-06	CUST232
5	309	2023-12-23	CUST309
6	310	2023-10-12	CUST310
7	363	2023-06-03	CUST363
8	371	2023-02-21	CUST371
9	397	2023-03-10	CUST397
10	454	2023-02-22	CUST454
11	512	2023-11-07	CUST512
12	739	2023-11-29	CUST739

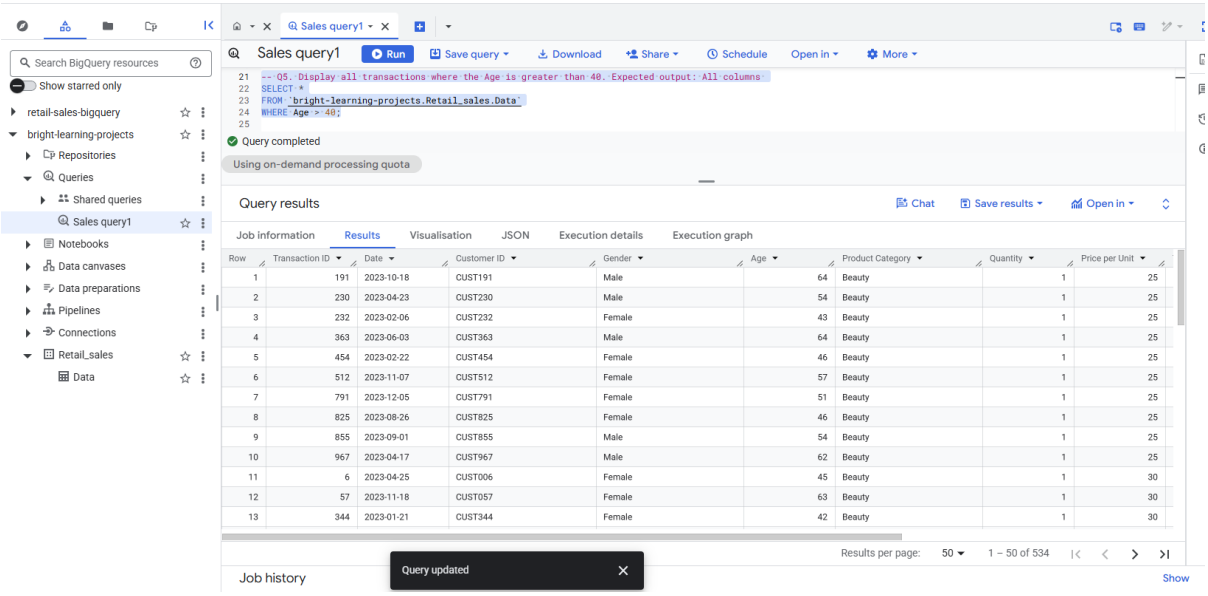
3. Display all the distinct product categories in the dataset. Expected output: Product Category



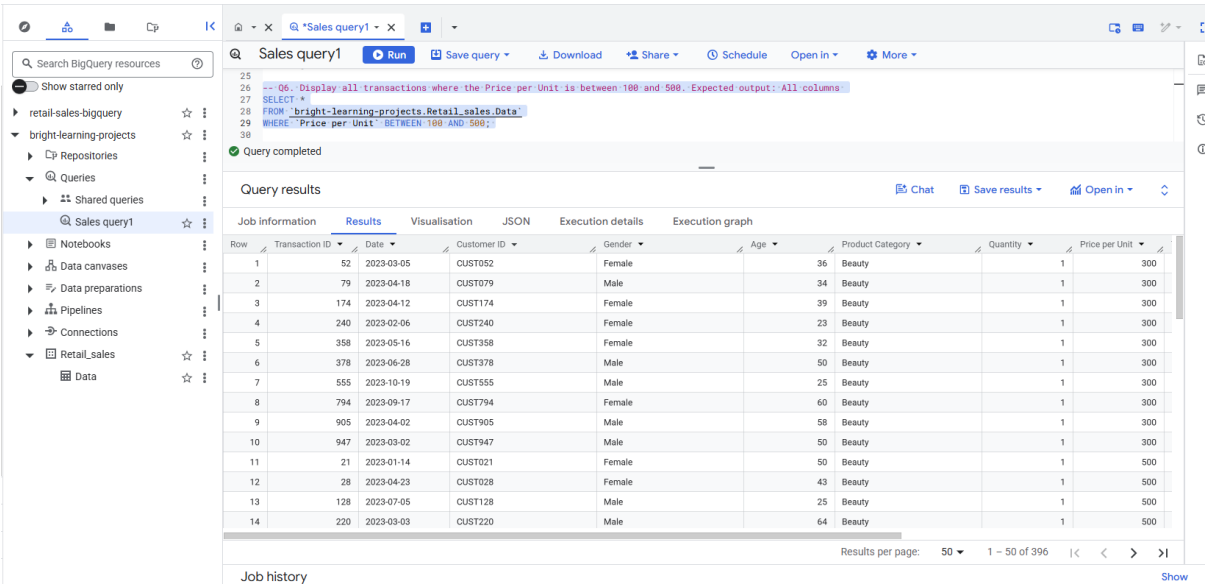
4. Display all the distinct gender values in the dataset. Expected output: Gender



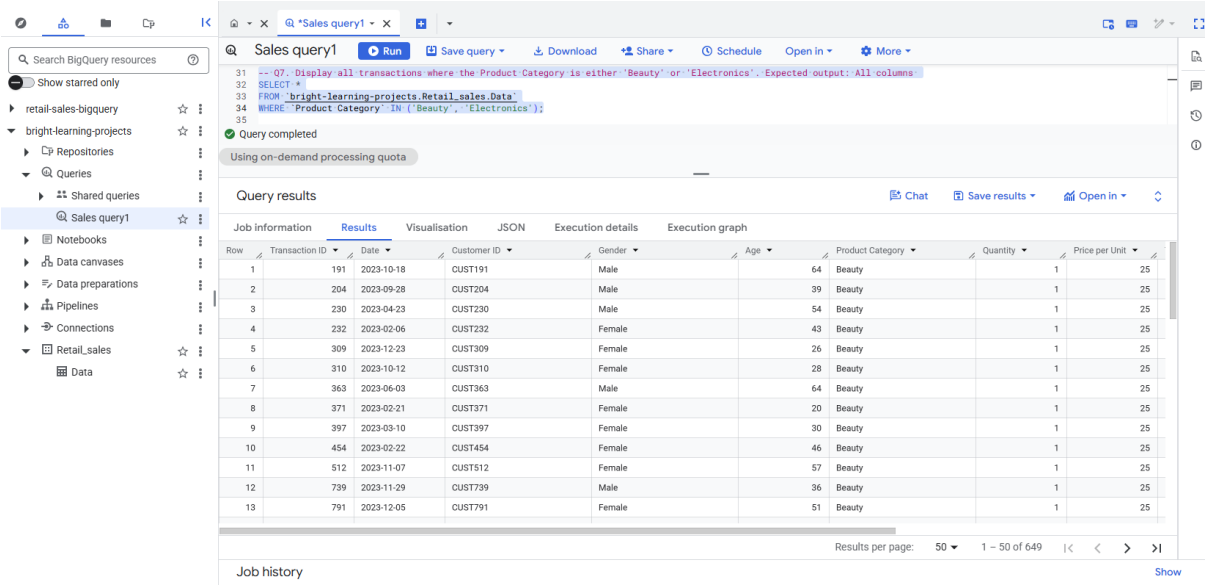
5. Display all transactions where the Age is greater than 40. Expected output: All columns



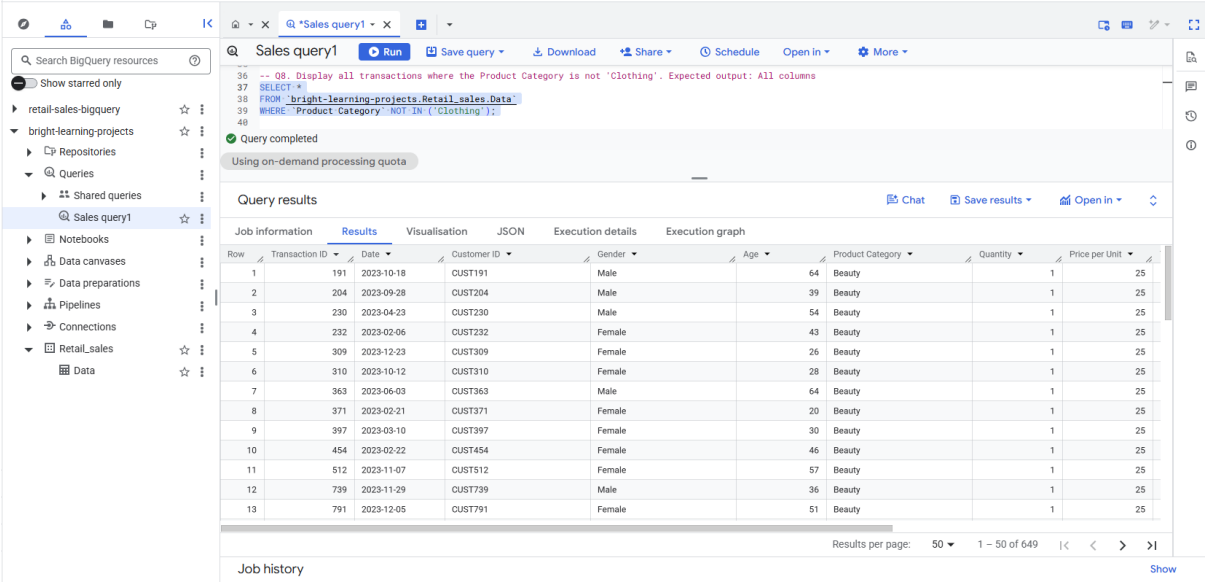
6. Display all transactions where the Price per Unit is between 100 and 500. Expected output: All columns



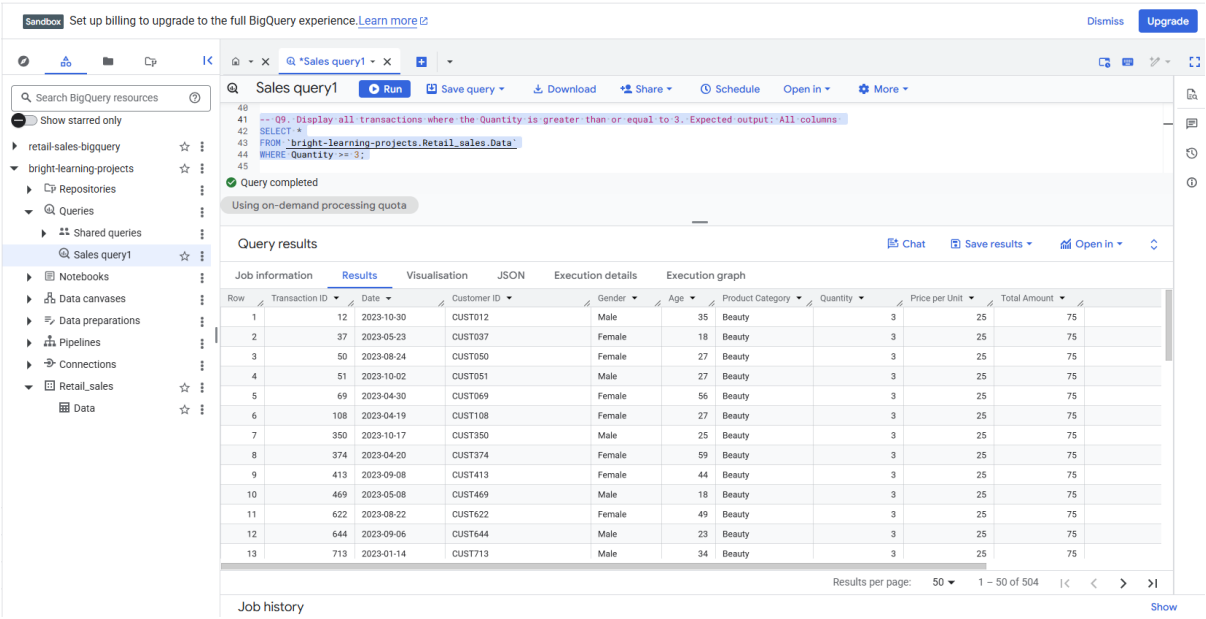
7. Display all transactions where the Product Category is either 'Beauty' or 'Electronics'. Expected output: All columns



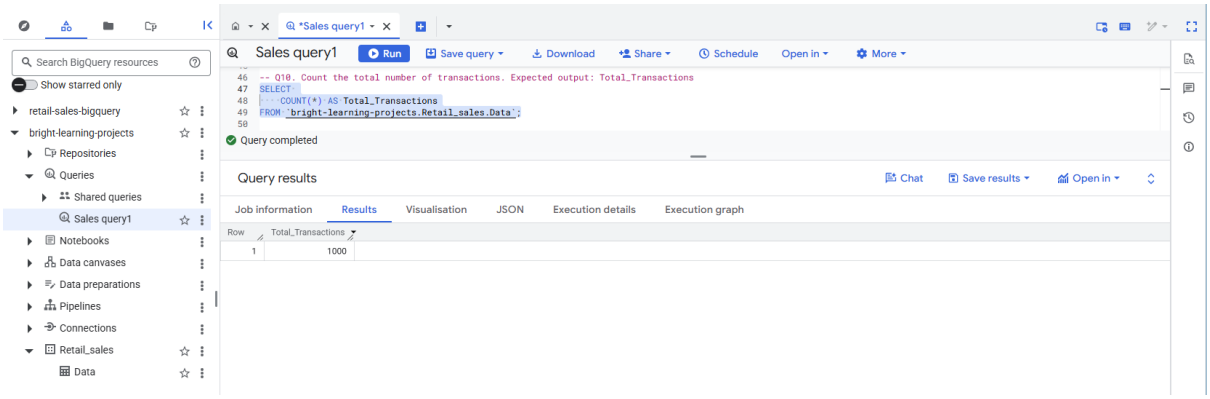
8. Display all transactions where the Product Category is not 'Clothing'. Expected output: All columns



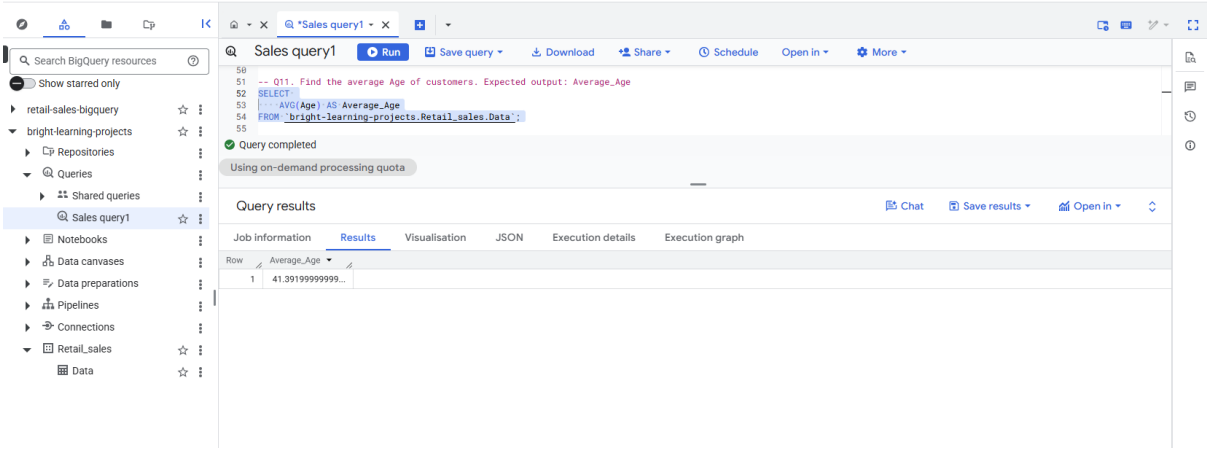
9. Display all transactions where the Quantity is greater than or equal to 3. Expected output: All columns



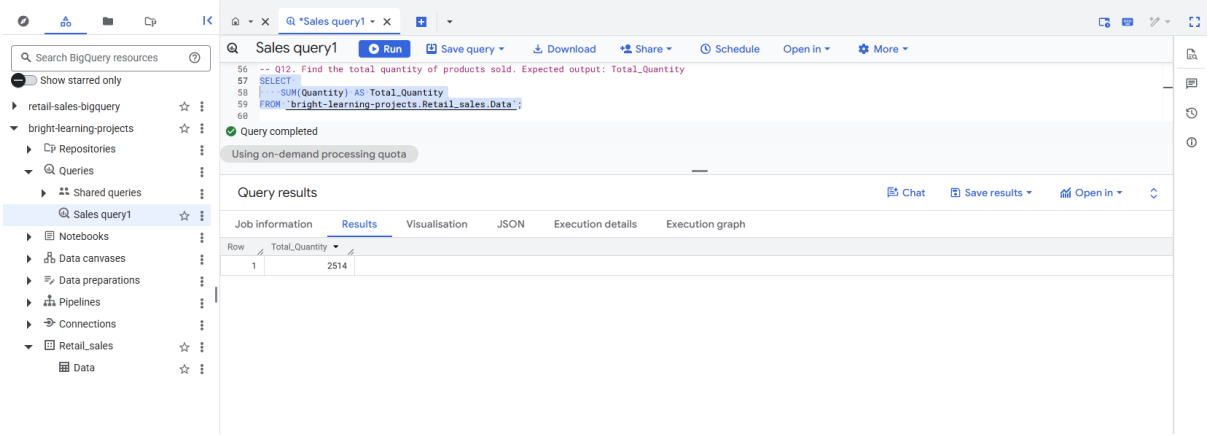
10. Count the total number of transactions. Expected output: Total_Transactions



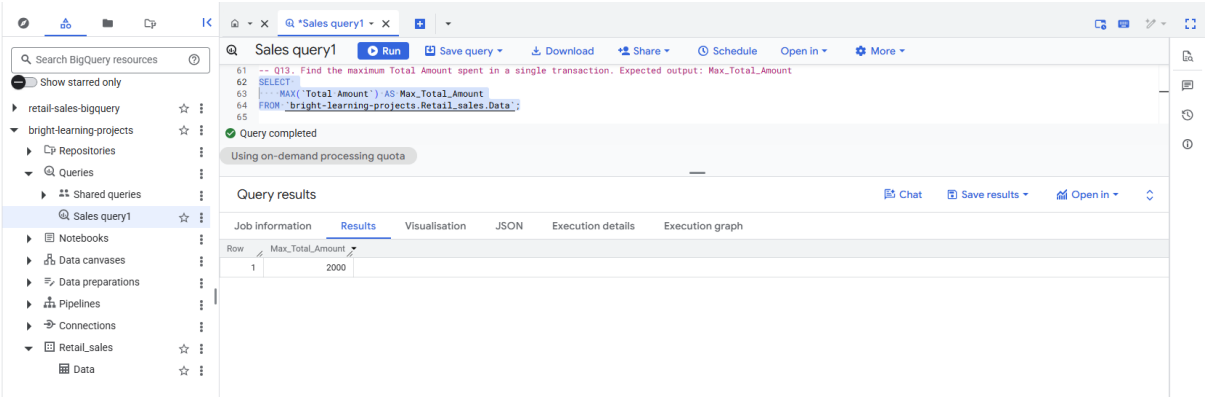
11. Find the average Age of customers. Expected output: Average_Age



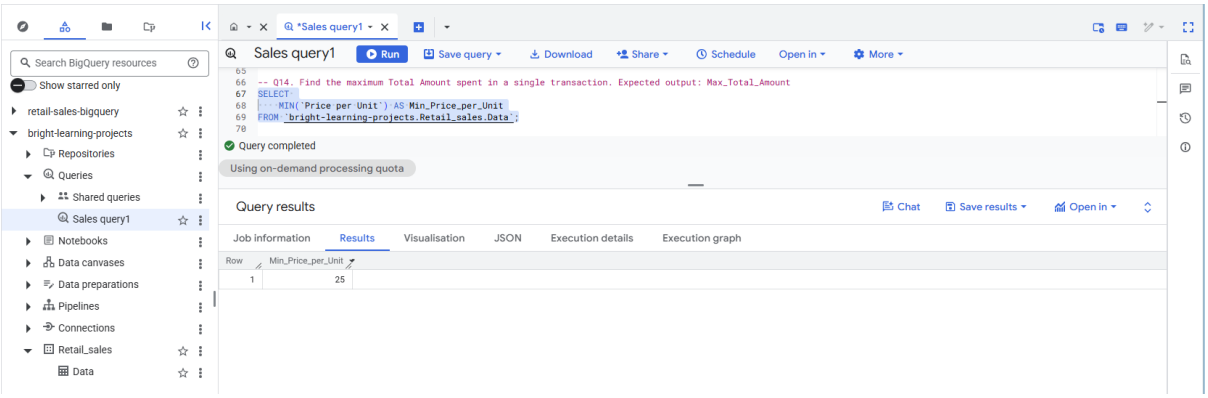
12. Find the total quantity of products sold. Expected output: Total_Quantity



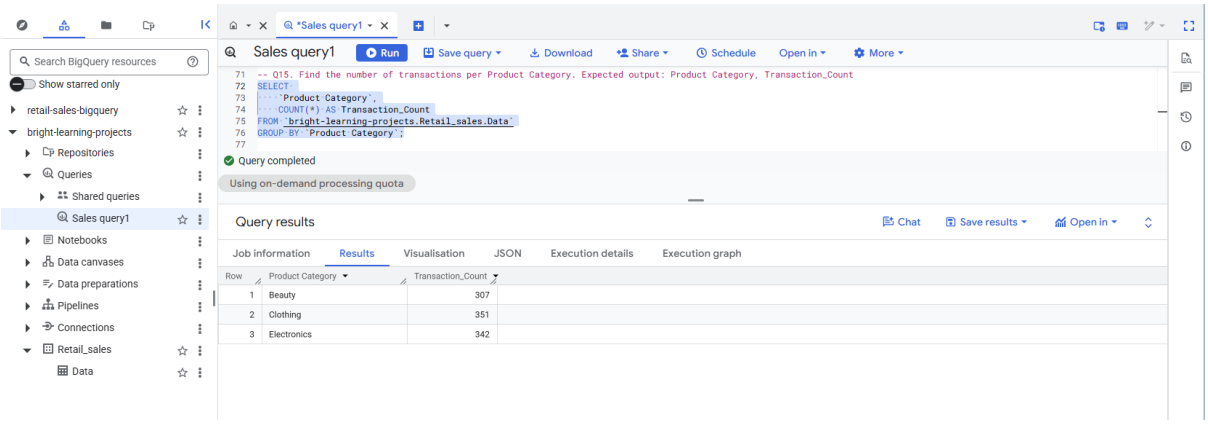
13. Find the maximum Total Amount spent in a single transaction. Expected output: Max_Total_Amount



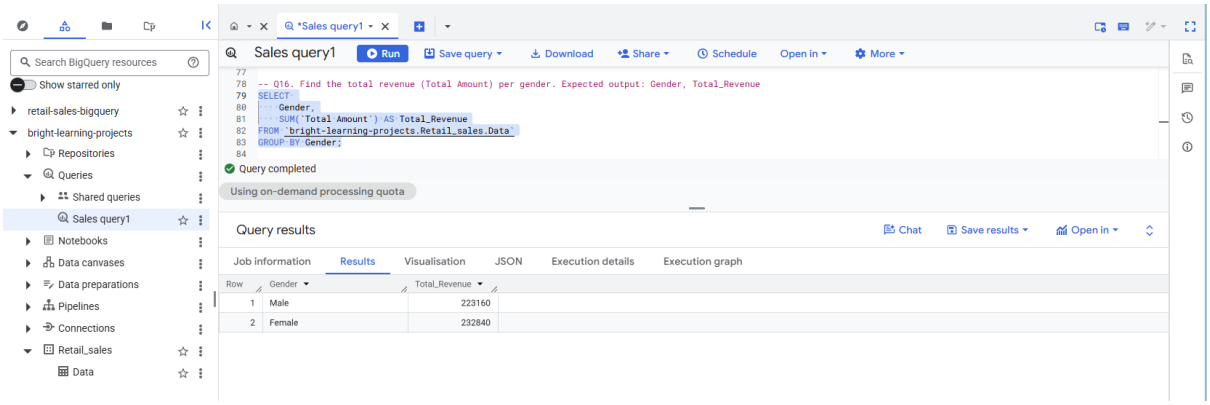
14. Find the maximum Total Amount spent in a single transaction. Expected output: Max_Total_Amount



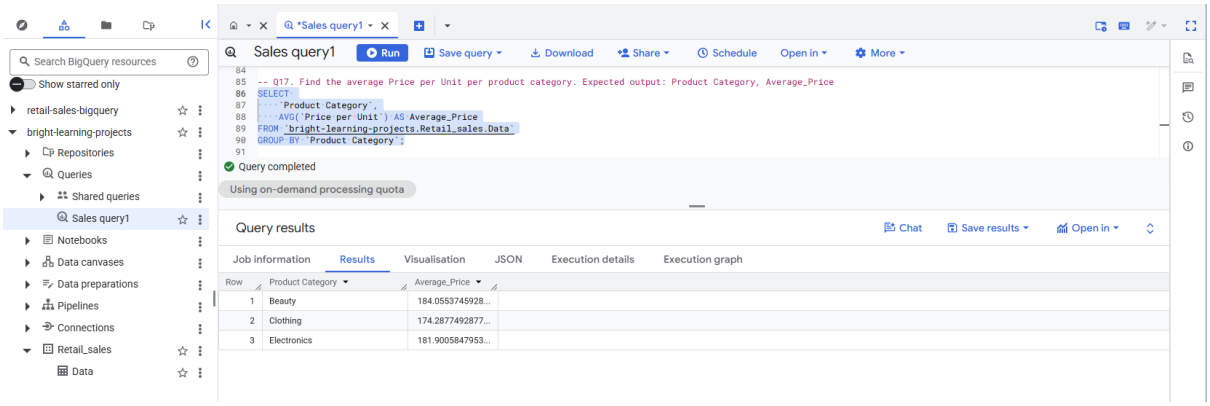
15. Find the number of transactions per Product Category. Expected output: Product Category, Transaction_Count



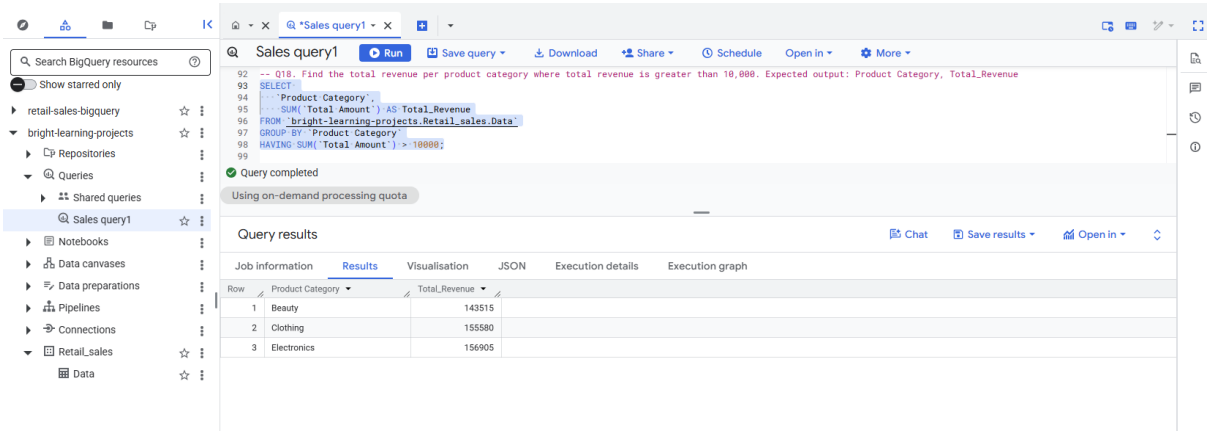
16. Find the total revenue (Total Amount) per gender. Expected output: Gender, Total_Revenue



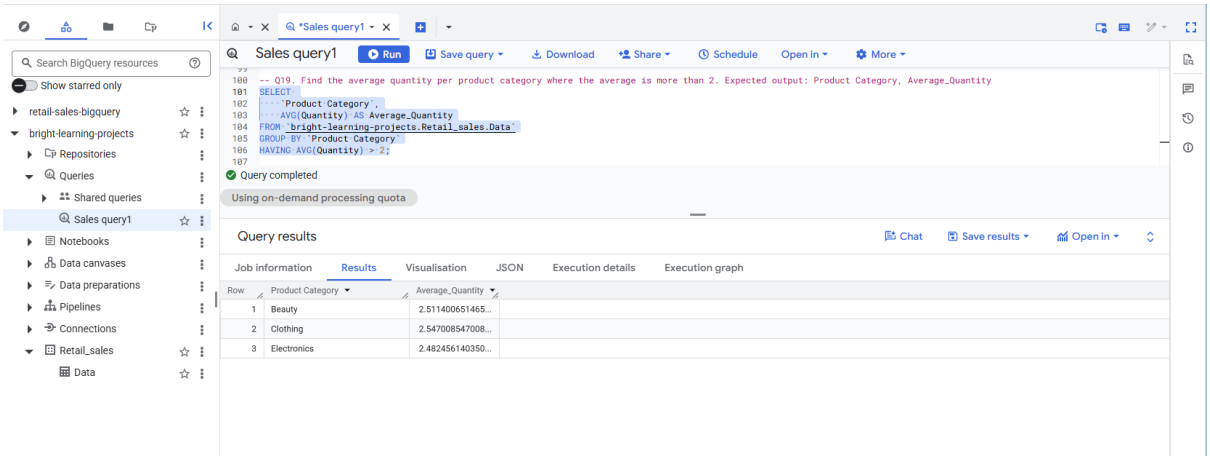
17. Find the average Price per Unit per product category. Expected output: Product Category, Average_Price



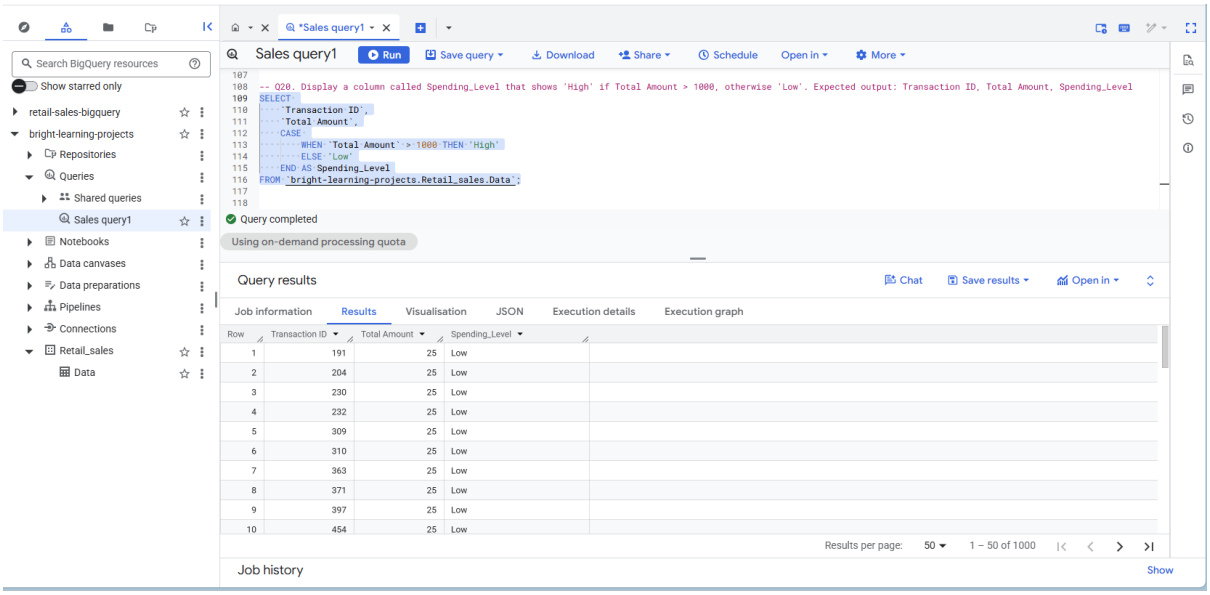
18. Find the total revenue per product category where total revenue is greater than 10,000. Expected output: Product Category, Total_Revenue

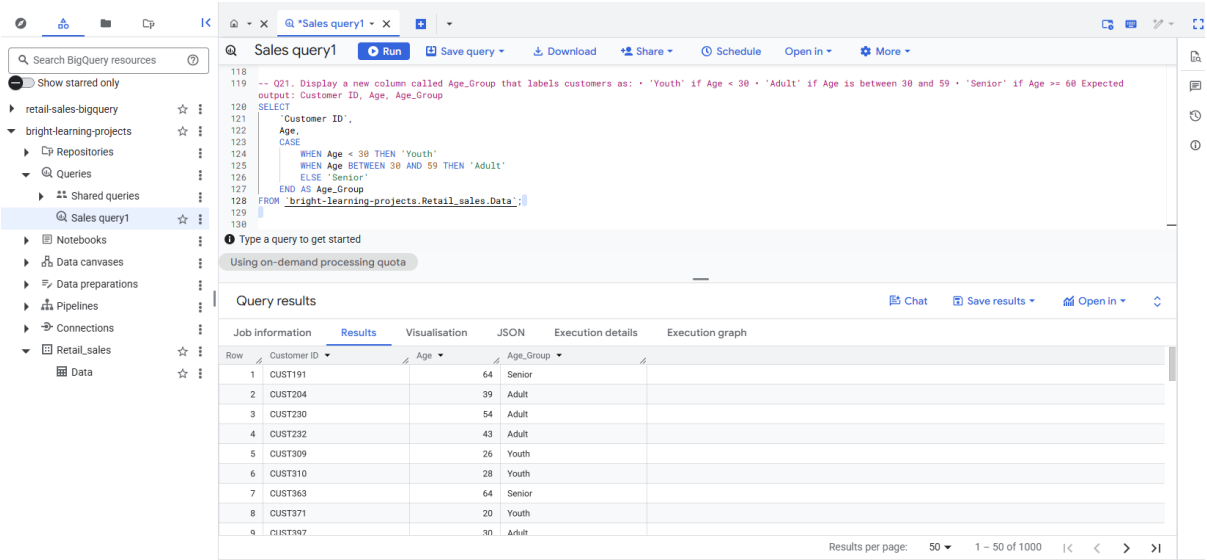


19. Find the average quantity per product category where the average is more than 2. Expected output: Product Category, Average_Quantity



20. Display a column called Spending_Level that shows 'High' if Total Amount > 1000, otherwise 'Low'. Expected output: Transaction ID, Total Amount, Spending_Level





21. Display a new column called Age_Group that labels customers as: • 'Youth' if Age < 30 • 'Adult' if Age is between 30 and 59 • 'Senior' if Age >= 60 Expected output: Customer ID, Age, Age_Group ty
